Joerg Heining
IAB

Fall 2025

Motivation

Substantial monopsony power in the labor market

- ▶ Typical estimate suggest firm-specific labor supply elasticities of $\sim 3-5$
- ▶ Job to job mobility is important for wage growth

Many reasons workers may not search or switch firms

- ▶ Beliefs about outside pay (average, or firm-specific)
- ▶ Beliefs about offer probabilities
- ▶ Switching costs/inertia

What the key friction to mobility is matters for policy & theory

- ▶ Variety of policy interventions directly target worker information (Council of Economic Advisors, 2016); switching costs suggest interventions may need to occur earlier
- ▶ Beliefs about pay at the core of directed vs. random search models
- ▶ New vs. new classical monopsony

This Paper

1. What do workers believe about firm pay?

- ▶ Surveyed >10k full-time German workers through the IAB.
- ▶ Developed an infrastructure that allows us to link workers' answers about specific, named firms to data, incl. admin data on those firms.
- ▶ Asked workers what they think they would make at specific outside firms.

2. Do these beliefs affect workers' search behavior?

- ▶ Asked workers what firms they would apply to if they wanted to switch firms.
- ▶ Asked workers whether they would apply to specific researcher-provided firms.

3. Why don't workers move?

- ▶ Asked workers how likely they would be to search if outside pay were X% higher.
- ▶ Firm-specific hypothetical choice experiments: rank hypothetical **offers** with randomized raises.

Preview of Results

1. Workers do not believe in a uniform outside option.

- ▶ About half of workers report knowing wages at time of application.
- ▶ Workers expect their wages would vary across firms, holding position fixed.
- ▶ There are "firm effects" in workers' beliefs.
- ▶ Expected wages and wage premia are correlated with admin data predictions.

2. Workers are more likely to consider applying to firms they believe pay higher wages.

- ▶ Joint test that workers direct their search and believe in firm rents.
- ▶ Amenity valuations are positively correlated with perceived firm wage premia.

3. Many workers are not marginal to their current firm.

- ▶ Switching costs are 7-18% of a worker's annual salary.
- ▶ Amenity valuations differ between insiders and outsiders.

Related Literature

Competition in the Labor Market

- ▶ This paper: workers expect firms to vary in wages and amenities, and believe $\text{cov}(a_j, \psi_j) > 0$

Workers' Information About the Labor Market

- ▶ e.g. Reynolds (1951); Caldwell and Harmon (2019); Jäger et al. (2024); Cullen (2023)
- ▶ This paper: a large share of workers have information on what specific outside firms would pay

Ethnographic Research on the Labor Market

- ▶ e.g. Myers and Shultz (1951); Reynolds (1951); Rees and Shultz (1970)
- ▶ This paper: compare workers' preferences and beliefs to admin. data

Framework

Setup

- ▶ Workers can apply to multiple firms from $\mathcal{J} = \{1, 2, \dots, J\}$
 - ▶ $j(i, t)$ denotes the worker's firm in period t
 - ▶ $A \subseteq \mathcal{J} \setminus \{j(i, t)\}$ is their application set
 - ▶ Firms j would pay i log wages w_{ij}
- ▶ Application costs κ
- ▶ Offer probabilities p_k
- ▶ Switching cost s_i if receive and accept an offer from a new firm
- ▶ Discount rate $\delta \in (0, 1)$
- ▶ Exogenous job destruction rate λ

Utility

Flow utility:

$$u_{ikt} = \beta w_{ikt} + a_k + \epsilon_{ikt} \text{ [actual]}$$

$$\tilde{u}_{ikt} = \beta \tilde{w}_{ikt} + a_k + \epsilon_{ikt} \text{ [perceived]}$$

Perceived value of firm k :

$$\begin{aligned} \tilde{V}_{ik} = & \underbrace{\beta \tilde{w}_{ik} + a_k + \epsilon_{ik}}_{\tilde{u}_{ik}} \\ & + \max_{A \subseteq \mathcal{J} \setminus \{k\}} \left\{ -\kappa |A| + \delta \mathbb{E}_{B(A)} \left[(1 - \lambda) \max \left\{ \overbrace{\tilde{V}_{ik}}^{\text{stay}}, \overbrace{\max_{m \in B(A)} (\tilde{V}_{im} - s_i)}^{\text{switch employers}} \right\} \right. \right. \\ & \left. \left. + \lambda \max \left\{ \underbrace{V_{i0}}_{\text{unemployed}}, \underbrace{\max_{m \in B(A)} (\tilde{V}_{im} - s_i)}_{\text{switch employers}} \right\} \right] \right\}. \end{aligned} \quad (1)$$

Definitions

Search is **directed** if there exists at least one pair of firms (k, l) with $\tilde{w}_{ikt} \neq \tilde{w}_{ilt}$ such that altering these beliefs, while holding aggregate distributions constant, changes the worker's application decisions.

This behavior requires that:

- ▶ (1) workers believe their own pay would vary across outside employers (i.e., $\tilde{w}_{ikt} \neq \tilde{w}_{ilt}$ for $k \neq l$)
- ▶ (2) workers can link their beliefs $\tilde{w}_{ikt}$ and the values of amenities a_k to the identity of the firm k .

Implications of Model

1. Probability of Search (and Mobility) is Increasing in Outside Options and Decreasing in Switching Costs

- ▶ Pessimistic biases reduce search and mobility
- ▶ Switching costs reduce search even when worker believes outside firms offer more

2. Mistaken Non-Search is Less Likely With Firm-Specific Pay Beliefs.

- ▶ Intuition: only need beliefs about one firm to exceed the threshold (rather than average)

3. Directed Searchers Apply More to Firms with Higher Perceived Wages.

- ▶ Implies that application-wage elasticities are higher when more workers can direct their search
- ▶ Standard models: markdowns are lower when elasticities are higher

Data

Worker Survey and Linkages

Fielded a survey to full-time German workers between 25 and 50

- ▶ Invitations sent from the IAB by mail; survey completed online
- ▶ Initial survey (11.4% response rate) conducted in 2022 
- ▶ Follow-up survey (51% response rate) conducted in spring 2024 
- ▶ Randomized incentives to account for selection into non-response 
- ▶ Over-sampled workers at firms surveyed in Caldwell, Haegele and Heining (2024)

Linked the ~10k worker-level responses to IAB Social Security records

- ▶ Worker histories, occupation and industry codes, AKM effects (Bellmann et al., 2020)

Constructed a novel linkage between workers' responses about specific firms and:

- ▶ Social Security records and wage premia associated with those firms
- ▶ ORBIS and Kununu

Questions About Two Types of Firms

Selecting Researcher-Provided Firms

1. Not too many firms
 - ▶ 30 well-known German firms: 18 publicly listed, 12 family-owned.
 - ▶ Received more than 39.1 million page views on employer rating platform Kununu.
2. Important in the wage distribution
 - ▶ Total employment in Germany > 1.8 million.
3. Known to respondents
 - ▶ 23% of respondents have worked at least at one of the firms in the past ten years .
 - ▶ 17 of the 30 firms are among the top 100 firms that workers named themselves.
4. Horizontally reasonable ▶
 - ▶ Occupational distributions match
5. Vertically reasonable
 - ▶ Median and mean pay throughout observed worker distribution ▶

1. Eliciting Information About Search

Suppose you planned to move to a new company in the next {one/three/six} months. Would you consider applying to any of these? Please select all that apply.

- ☐ Company 1
- ☐ Company 2
- ☐ Company 3
- ☐ Company 4
- ☐ Company 5
- ☐ Company 6
- ☐ Company 7
- ☐ I would not apply to any of these

2. Eliciting Information About Wages

Suppose you planned to move to a new company in the next {one/three/six} months. Would you consider applying to any of these? Please select all that apply.

- ☐ Company 1
- ☐ Company 2
- ☐ Company 3
- ☐ Company 4
- ☐ Company 5
- ☐ Company 6
- ☐ Company 7
- ☐ I would not apply to any of these

What do you think your gross annual pay would be if you worked at these companies in a position similar to your current one?

Company 2: [Fill in gross pay]

Company 4: [Fill in gross pay]

Company 7: [Fill in gross pay]

3. Eliciting Preferences via Hypothetical Choice Experiments

Suppose you planned to move to a new company in the next {one/three/six} months. Would you consider applying to any of these? Please select all that apply.

- ☐ Company 1
- ☐ Company 2
- ☐ Company 3
- ☐ Company 4
- ☐ Company 5
- ☐ Company 6
- ☐ Company 7
- ☐ I would not apply to any of these

What do you think your gross annual pay would be if you worked at these companies in a position similar to your current one?

Company 2: [Fill in gross pay]

Company 4: [Fill in gross pay]

Company 7: [Fill in gross pay]

Suppose you can remain at your current company or switch to any of the companies listed below and immediately receive the raise specified.

Please rank the following job offers from 1 to 4 where 1 is the offer you are most likely to take and 4 is the offer you are least likely to take.

Company 2 with a X% raise _____

Company 4 with a Y% raise _____

Company 7 with a Z% raise _____

Remain at current firm at current pay

Worker-Provided Firms

Suppose you planned to move to a new company in the next {one/three/six} months. Would you consider applying to any of these? Please select all that apply.

- ☐ Company 1
- ☐ Company 2
- ☐ Company 3
- ☐ Company 4
- ☐ Company 5
- ☐ Company 6
- ☐ Company 7
- ☐ I would not apply to any of these

“Suppose you planned to move to a new company in the next {one/three/six} months. What are companies that you would consider applying to?

Please list three companies that you would consider applying to and that hire employees in positions like yours (e.g. “Placeholder Inc”). These can be companies without current job vacancies.”

[Fill in Company 1]

[Fill in Company 2]

[Fill in Company 3]

☐ I do not want to answer this question

Worker-Provided Firms

- ▶ Worker-provided firms span a broad range of the German labor market
 - ▶ Total employment in Germany > 6.2 million.
 - ▶ Received more than 190 million page views on employer rating platform Kununu.
- ▶ Nearly 3000 distinct firms—of varying sizes—are mentioned 
 - ▶ Ex: local municipal utility, small manufacturer of agricultural equipment, glass producer

▶ Descriptive Statistics

▶ Comparison with Researcher-Provided

What Do Workers Know About Pay?

1. Many Workers Know Wages at the Time of Application

At the time that you applied, did you know what salary you would earn?

2. Workers Perceive There to Be A Firm Component to Pay

What do you think your gross annual salary would be if you worked at these companies in a position similar to your current one?

	Fraction Identical	Std. Deviation	Max/Min	N
	(1)	(2)	(3)	(4)
<u>A. Researcher-Provided Firms</u>				
Initial Survey	0.26	5673	1.18	3715
Follow-Up Survey	0.30	5294	1.15	3163
<u>B. Worker-Provided Firms</u>				
All Workers	0.25	5863	1.19	4433
All in Same State	0.22	4869	1.18	509
All in Same District	0.26	4701	1.19	173
All in Same Municipality	0.22	5084	1.21	159

Note: We asked 50% of workers to provide expected wages at specific researcher-provided firms. Column 1 reports the share of respondents who indicated the exact same expected pay across all three firms. Columns 2 and 3 report averages across respondents.

2. Workers Perceive There to Be A Firm Component to Pay

What do you think your gross annual salary would be if you worked at these companies in a position similar to your current one?

$$\log \tilde{w}_{ij} = \alpha_i + \psi_j + \epsilon_{it}. \quad (2)$$

- ▶ Summarize workers' expectations at (randomly-chosen) researcher provided firms ▶ Balance
- ▶ Expected wage premia ψ_j
 - ▶ Identified using within-worker variation in expected salaries
 - ▶ Relative to a “base firm” whose premium is normalized to 0
- ▶ Worker fixed effects α_i
 - ▶ Portion of a worker's salary that they expect to be firm-invariant (across the provided firms)

2. Workers Perceive There to Be A Firm Component to Pay

Split-Sample Estimates

Between-Group Correlation in ψ_j

3. Predictions are Correlated with Administrative Data Predictions

Pay Expectations and Consideration

Linking Search to Pay: Within-Worker, Within-Firm Design

$$\text{Consider } ij = \beta \log \tilde{w}_{ij} + X_{ij} + \gamma_j + \lambda_i + \gamma_{t(i)} + \epsilon_{ij}$$

	All Workers			Risk Tolerance		Would be Reluctant to Apply if P(Success) Were Low	
				Low	High	No	Yes
	(1)	(2)	(3)	(4)	(5)	(6)	(7)
Own Pay Expectation	0.341*** (0.050)	0.313*** (0.050)	0.309*** (0.050)	0.256*** (0.056)	0.441*** (0.103)	0.297*** (0.084)	0.240*** (0.087)
Distance Controls	No	Yes	Yes	Yes	Yes	Yes	Yes
Same-Sector Control	No	No	Yes	Yes	Yes	Yes	Yes
Observations	21272	21272	21272	14967	6305	5392	6507
Number of Workers	6440	6440	6440	4519	1921	1476	1781
Test of equality (p-value)	---	---	---	.116		.64	
Mean of Outcome	0.311	0.311	0.311	0.310	0.313	0.274	0.305
Implied Elasticity	1.097*** (0.161)	1.007*** (0.161)	0.993*** (0.161)	0.827*** (0.182)	1.406*** (0.330)	1.082*** (0.307)	0.788*** (0.286)

Note: Regressions use data from researcher-provided firm module of initial and follow-up surveys.

Several Designs

▶ Design 1: Link Consideration of Researcher-Provided Firms to:

1. Pay premia workers associate with that firm
2. Observed pay premia
3. Pay policy (Log of mean pay)

▶ Design 2: Link Workers' Free-Text Responses to Pay Premia

Information and Mobility

Not All Workers Want to Switch Firms

We asked workers to rank three outside firms with randomized raises and their inside firms with no raise.

Not All Workers Will Even Start Searching

Imagine you were to discover that other companies in your area pay {X%} more than your current employer. How likely is it that you would start applying for jobs at other companies?

Implied Labor Supply Elasticities

	Search	Move to a Researcher- Provided Firm	Move to a Worker-Provided Firm		
			Baseline	Same Commute	Same Growth
	(1)	(2)	(3)	(4)	(5)
Outside Pay	1.880*** (0.146)	0.391*** (0.133)	1.566*** (0.236)	1.288*** (0.364)	0.945** (0.368)

Implied Elasticity	7.139*** (1.058)	1.219** (0.477)	4.364*** (1.037)	3.031*** (1.139)	2.320** (1.130)
Observations	3557	21872	12217	6264	6272

Stated Reasons

Implied Switching Costs

$$u_{ij} = \beta \log w_{ij} + c \cdot 1 \{j(i) \neq j\} + \epsilon_{ij} \quad (3)$$

	Move to a Researcher- Provided Firm		Move to a Worker-Provided Firm		
	Baseline	Distance Controls	Baseline	Same Commute	Same Growth
	(1)	(2)	(3)	(4)	(5)
Log Raise	6.172*** (0.492)	6.251*** (0.495)	8.112*** (0.824)	12.323*** (1.283)	10.207*** (1.207)
Incumbent	1.132*** (0.074)	0.703*** (0.129)	0.596*** (0.106)	0.771*** (0.134)	0.774*** (0.135)
Observations	29961	29961	17539	8821	8782
Number of Workers	7735	7735	4796	2400	2385
Implied Switching Cost	0.183*** (0.009)	0.112*** (0.019)	0.074*** (0.008)	0.063*** (0.007)	0.076*** (0.008)

Unpacking the Own-Firm Preference

$$u_{ij} = \beta \log w_{ij} + a_j + (\phi) \cdot 1 \{j(i) \neq j\} + \mu \log d_{ij} + \epsilon_{ij}$$

Use workers' preferences over provided firms with randomized raises to identify β and a_j

1. Do workers believe firms vary in ex ante rents ($a_j \neq 0$)
2. Do workers believe that higher wages are offset by lower amenities?
3. Do valuations differ between insiders and outsiders (as suggested by “personal connections”)?

Firm-Specific Valuations of Amenities

	Outside Firms Only		All Firms		Consider or Incumbent Only

Why Is There Limited Mobility?

- ▶ A large literature shows that there is limited mobility: firm-specific labor supply elasticities of 3-5
- ▶ We show that this is likely due to **preferences** not information frictions
 - ▶ About half of workers say they had firm-specific pay when they joined their firm
 - ▶ Expectations are correlated with objective values
 - ▶ Labor supply elasticities of 2-4 based on randomized offers
- ▶ Interesting direction for future work: Firms vary in ex post rents
 - ▶ Results suggest personal connections may be important

Note: Firm group is an indicator for the set of firms a worker is assigned to, firm is an indicator for the firm a worker is assigned to, and firm quality is the objective pay premium (Bellmann et al., 2020). We perform separate regressions of each covariate (indicated in the row) on the characteristics indicated in the column. Each entry provides the p-value from an F-test that all of the included regressor(s) (other than the constant) are equal to zero. P-values are calculated using standard errors clustered at the worker level. We assigned each worker to one of 18 groups, which defined the set of firms they would see.

What Workers Believe About High Wage Firms [▶ Back](#)

Suppose you are comparing job opportunities at two different companies: Company 1 pays 10% above the market average and Company 2 pays 30% above the market average.

1. Which company do you think attracts more qualified applicants per opening?
 - ▶ Company 1
 - ▶ Company 2
 - ▶ Both attract the same number of applicants
2. Which company do you think provides better non-wage amenities (e.g., home office, childcare subsidy)?
 - ▶ Company 1
 - ▶ Company 2
 - ▶ Both provide the same non-wage amenities

Reynolds (1951) [▶ Back](#)

*“These results confirm the prevalent impression that workers are poorly informed about job opportunities. Moreover, it is doubtful how far the situation can be altered by collecting and disseminating additional job information. **The basic difficulty is that satisfactorily employed workers are almost entirely uninterested in employment conditions in other companies. This lack of interest is an even more serious obstacle than the difficulty of compiling accurate job information [emphasis added]**”*

–Reynolds (1951)

What Could Information Do?

[▶ Back](#)

	All Workers Are Uninformed	Did Not Know Pay at Application	Difficult to Get a Better Job	Provide Uniform Pay
	(1)	(2)	(3)	(4)
Percent Informed	0	49.826***	44.107***	77.288***
	---	(0.854)	(0.897)	(1.131)
P(Search)	17.606***	4.867***	4.356***	2.048***
	(2.504)	(0.761)	(0.758)	(0.472)
P(Move to a Preferred Firm)	11.837***	2.784***	2.579***	1.486***
	(2.904)	(0.789)	(0.675)	(0.453)
P(Move to a Random Firm)	1.127	0.837*	0.963**	0.741**
	(1.761)	(0.475)	(0.454)	(0.294)

Note: In each column of this table, we estimate the impact of information with a different definition of being uninformed in each column. The sample includes workers who work at firms with below-median pay premia. In Panel A, we estimate the impact if we informed workers of the difference between the median worker's firm premium and their own firm's. In Panel B, we perform an analogous analysis if all workers were told they could receive 5% more at outside firms. Coefficients and standard errors are estimated via bootstrapping.

Alternative Specifications for Switching Costs [▶ Back](#)
